

JORDI ALTISÈN

Technical Artist Intern | Pipeline Tools & Automation | Editor Scripting | Unity

+34 603 65 91 07 - Barcelona - jordialtisencortijo@gmail.com - artstation.com/compcube - linkedin.com/in/jordialtisencortijo/

Technical Artist with **2+ years** and **2,500+ hours** building and maintaining **custom production tools**, **editor scripts**, and **pipeline automation** for Unity. Solo-developed **Hollow End**, a horror/exploration game in Unity HDRP, owning the full art pipeline across **140+ assets** and shipping **custom editor tools** that removed repetitive manual work from asset placement and rigging. Comfortable working across engine, art, and TypeScript/Python tooling. Graduate of **Game Design and Development** degree, seeking a Technical Artist internship to support an art team's tools and pipeline the way I've supported my own.

SKILLS

- **Tools & Pipeline:** Custom Editor Tools (C#) · Pipeline Automation · TypeScript · Python · FBX Export · Naming Convention · Git
- **Performance & Optimisation:** Draw Call Optimisation · GPU/CPU Profiling · Memory Management · LOD Setup · Material Atlasing · Trim Sheets · Occlusion Culling · Batching · Unity Profiler · Frame Debugger · RenderDoc
- **Shaders & VFX:** Shader Graph · HLSL · VFX Graph · Custom Materials · Shader Optimisation · Overdraw Reduction · HDRP/URP Rendering
- **Software:** Unity · Unreal Engine · Blender · Substance 3D Painter · Photoshop · JavaScript

PROJECTS

Unity Editor Tool — Object Replacement & Scatter | C# / Editor Scripting [\[View Project\]](#)

- Developed a custom **Unity EditorWindow** tool for **object replacement and scattering**, supporting **weighted prefab selection**, **surface-aligned placement**, and **deterministic seeds** to improve environment assembly and reduce repetitive manual placement.

Pipeline Automation Tool — Photoshop → Spine2D | TypeScript [\[View Project\]](#)

- Designed a **PSD-to-Spine export pipeline** and built a **TypeScript Tool** that converts a **layered PSD file** into a **Spine-ready project** by auto-generating bone hierarchies, pivots, and animation setup, cutting manual rigging steps entirely.

Real-Time VFX Systems — ShaderGraph · VFX Graph | Mobile-ready [\[View Project\]](#)

- Built **2 mobile-optimised real-time stylised effects (Electromagnetic Shield & Stylised Waterfall)** using Unity's Particle System and VFX Graph, controlling overdraw, reducing particle count, and minimising shader cost while maintaining visual clarity.

PROFESSIONAL EXPERIENCE

TECHNICAL ARTIST - Self-employed

2024 - Currently

HOLLOW END · Photorealistic 3D Exploration Game · Unity HDRP · Steam June 2026 [\[View Project\]](#)

Solo developed a **photorealistic Unity HDRP escape room** set in an abandoned metro station, **awarded High Honors**. Designed and owned the **full production pipeline** from scratch, building a **scalable modular environment system** across **140+ assets**. Scheduled Steam release June 2026.

- **Tooling & Pipeline:** Built and relied on custom editor tools (scatter/replacement) and a strict naming-convention pipeline to keep a **140+ asset production** organised and repeatable across two scene versions.
- **Atlasing & Draw Call Optimisation:** Structured **14 texture atlases** and **9 trimsheets** across **80+ props** and **75+ modular pieces** by material zone and reuse frequency, **reducing material count by 43%** and improving batching efficiency across the full scene.
- **Modular System Design:** Defined a full custom asset pipeline (**low poly → UVs → high poly → Substance bake → Unity**) with strict naming conventions, designing all **80+ props dual-version-ready** at an average **50k→2k poly reduction**, eliminating redundant geometry and texture work.
- **Shader Systems:** Developed **4 custom ShaderGraph shaders** — intersection dust, stained glass, image-space retro-screen, and interactable outline — delivering complex visual systems across the full scene with zero additional texture overhead.

SOFTWARE DEVELOPER - TeamNow

2024 - 2025

- Developed and maintained **enterprise applications** on the **ServiceNow** platform for clients including **Banco Santander**, **Europastry**, **Sorigué** and **AEMET**, delivering features in structured SCRUM cycles within production environment

WEB DEVELOPER - Freelance

2023 - 2025

- Developed and deployed full production websites [tirambarcostadaurada.com | btt-valls.com | edujuguetes.com]

EDUCATION

Universitat de Girona

2020 - 2025

Bachelor's Degree in Game Design and Development
